

**Product Name:** MOSGO ALGAE REMOVER

**Contents:** Didecyl dimethylammonium chloride solution. Formulation: Soluble concentrate.

**Use:** Controls Algae and Lichen causing red and green discolouration on houses.

**General Description:** The red or green discolouration seen on most modern day houses is caused by algae and lichen growth. Lichen growth is an indication that water is present, and water is responsible for the deterioration of the structure, frost damage – and in severe cases the damp extending right through the building. Growths disfigure facing bricks and are a contributing factor to spoiling of brickwork and concrete, causing corrosion of mortar joints; they also hold and attract water and secrete acids which degrade the fabric of the masonry. Surface "washes" of caustic type product are ineffectual against such tenacious growths since they only remove the visible growth leaving behind the roots which regenerate and grow within a short period of time.

**Rates of Application:** Mix 1 part i.e. 1 litre of Mosgo Algae Remover with 5 parts water i.e. 5 litres water and apply the 6 litres of the combined mixture to 150 sq. feet i.e. 10ft. x 15ft.square (13.9m<sup>2</sup>). Apply with brush or sprayer. Protect growing plants from direct spray. If spillage does occur wash off with water. After 48 hours heavy growths can be removed if so desired. Do not apply during periods of extreme heat, frost or wet weather. Protect from frost.
